

7.1.4 QIM Describe the facilities in the Institution for the management of the following types of degradable and non-degradable waste (within 500 words)

The Bio- Medical waste generated during the diagnosis, treatment and laboratory procedures are collected in appropriate colour coded containers. The Bio-degradable waste are disposed by means of manure pits.

The solid waste management is practiced to safely dispose the waste generated at the campus by way of segregating the waste as organic waste, recyclable waste and inert waste and processing the waste thus segregated.

Two bins system is followed for waste collection one for organic and one for recyclables. Different types of Solid waste management Training and Awareness program conducted to college students, staff, Housekeeping workers, security and green friends.

The institute takes sufficient measures to dispose the e-waste generated inside the campus properly.

Our Institute also takes initiatives to reduce the generation of e-waste in the campus

It is also ensured that the generated e-wastes are not disposed along with the other solid waste generated in the campus.

Collection of e-waste separately is a sustainable approach to prevent such waste reaching the landfills and also provides an opportunity to recycle such waste.
